

CHECKLIGHT[®]-CLM

BY SERA-BRYNN

Easy. Continuous. Unrelenting.

- Next-generation signature, behavior, and machine learning (ML) algorithms continuously monitor registered endpoints, providing near real-time threat detection
- Instantaneously alerts user of attacks/threats via email, text, and dashboard notices

- Collects, aggregates, and maintains log data in a central location. Meets NIST SP 800-171, CMMC, HIPAA, and PCI DSS log management security requirements
- Designed to support log management and monitoring - with one tool, comply with 60 CMMC technical controls

- Developed former US government security officials with over 50 combined years of experience in cybersecurity

- Specializes in kill chain methodology for added protection against zero day viruses
- Recognizes known/unknown malware; malware-less attacks (WMI, PowerShell, VBA); and real-time and dwell-time attacks

- Works with Windows/MacOS/LINUX systems
- Requires minimal system resources (approx. 35MB and 1% CPU use)
- All processing done on cloud-native architecture (AWS)

- Endpoint protection that works across all operating systems and hardware on your network
- Provides comprehensive dashboard for visibility of endpoint health, update status, and overall security state

- Generates user-defined periodic summary reports to support compliance and audit requirements
- Offers consultative access to team of IT security engineers who can address breaches

The only product in the market confident enough to be backed by a \$250,000 warranty.
